Independent Practice Nurses Interest Group

## Independent Practice Nurse Professional Practice Nursing Profile Printable Guideline Document

All private practice and intra-practice nurses, i.e., employed by private sector, need to prepare a work description of their nursing scope of practice for a variety of reasons. Here are a few examples, i.e., College of Nurses, business operation, legal definition, marketing and publicizing.

The Independent Practice Nurses Interest Group (IPNIG) believes the written independent private practice nursing profiles can serve another purpose. IPNIG will collate the received nursing practice profiles in an Independent Nurse Practice Profile Reference Manual. The manual will become public documentation of the diversity of nursing services and the extended practices of Registered Nurses. The rationale is simple. By presenting the testimonial documentation the public will be better informed and will recognize nursing capabilities and utilize independent practice nursing services for healthy well-being.
